

Team 25 Team Charter

Team Members	1. Ragini Pawaiya(raginipawaiya5@gmail.com) 2. Kariuki Sophia (kariukisophia52@gmail.com) 3. Israel Georgewill(israelgeorgewill@gmail.com) 4. Esther Munyambu(esthermunyambu2004@gmail.com) 5. chinomso Akumah(Essy4God@gmail.com) 6. Shivpratik Chaudhari(shivpratkc@gmail.com) 7. Shivanand Tiwari (0126CD231145@oriental.ac.in) 8. Kotapati Venkatesh(kotapativenkatesh56@gmail.com)
Team Lead	Ragini Pawaiya (raginipawaiya5@gmail.com)
Team Members Roles and Responsibilities	Team Members Roles and Responsibilities Saint Louis University (SLU) — Office of International Services (OIS) Individual Company Contacts – Client, Role(s) in Company Ragini Pawaiya (raginipawaiya5@gmail.com) - Team Lead, coordinates team activities, assigns tasks, and ensures project objectives are achieved and report preparation . Kariuki Sophia (kariukisophia52@gmail.com) - Project Manager, provides guidance and support to team members and build dashboard in looker studio. Israel Georgewill(israelgeorgewill@gmail.com) - Project Scribe, responsible for taking meeting minutes and compare dashboard numbers to SQL numbers. Esther Munyambu (esthermunyambu2004@gmail.com) - Responsible for the dashboard design documentation and SQL validation scripts. Chinomso Akumah (Essy4God@gmail.com) - Research and Documentation Coordinator, responsible for gathering project-related information, responsible for metric reconciliation summary and compliance insight summary. Shivanand Tiwari (0126CD231145@oriental.ac.in) - maintain documentation and Wrote SQL validation queries in pgAdmin 4 against public."Sevis_Cleaned" table.

	Shivpratik Chaudhari (shivpratikk@gmail.com) - Compared dashboard numbers to SQL outputs; flagged mismatches (I-20 issued discrepancy, CANCELLATION label issue). Kotapati Venkatesh(kotapativenkatesh56@gmail.com)-Data quality review — verified cleaned dataset integrity in Supabase, cross-checked column completeness (null counts, field formats), and supported final report proofreading and consistency checks.
Mission, Vision Objectives & Core Values	<i>Mission</i> : To support Saint Louis University's Office of International Services by cleaning, integrating, and analysing international student data so that staff can confidently track I-901 fee payments, I-20 issuance, and deposit status without manual guesswork. <i>Vision Objectives</i> : Success to us means that by the end of this project, an OIS staff member can open a dashboard, see exactly which students are missing their SEVIS fee payment or still waiting on their I-20, and act on it the same day. We want our work to actually get used after we hand it over — not just sit in a report. As a team, we want to stay honest with each other about progress, divide work fairly, and not leave everything to one person at the last minute.
	<i>Core Values</i>: Integrity —In Week 3, we documented two unresolved discrepancies in the reconciliation table rather than presenting a clean but inaccurate result — specifically the I-20 issuance mismatch and the CANCELLATION label issue. Accountability — each member owns their deliverable for the week. If something is delayed, we say so early. Discipline — we stick to ISO date formats, clean naming conventions, and structured reporting because shortcuts create problems downstream. Respect — every team member's input gets heard in meetings, regardless of technical background. Innovation — We identified that the 91%+ "missing passport/visa" metric was a false alarm caused by enrollment timing, and reframed it as a pre-arrival monitoring metric to avoid misleading dashboard readers.

Internal Checks, Balances, and Reviews

Our team will work together to complete all project tasks on time and maintain the quality of our work. As the Team Leader, I will coordinate team activities, track progress, communicate with the sponsor, and ensure that deadlines are met.

We will hold a team meeting once every week to discuss completed work, review progress, solve any issues, and plan the next steps. Team members are expected to actively participate in meetings and share updates on their assigned tasks.

Before submitting any report or deliverable, the work will be checked by another team member to identify mistakes, missing information, or areas that need improvement. Necessary corrections will be made before the final submission.

SMART Goals

- **Specific:** Build a 7-tab Looker Studio compliance dashboard connected to Supabase PostgreSQL, write SQL validation scripts for all key metrics, and produce a full reconciliation and insight report.
- **Measurable:** All 7 dashboard metrics validated against SQL; reconciliation table completed with match/mismatch status for each metric.
- **Achievable:** Tasks divided by role — dashboard build, SQL scripting, design documentation, and insight writing assigned separately.
- **Realistic:** Dashboard connected to live data (3,524 records); SQL run in pgAdmin 4; two unresolved discrepancies flagged honestly and documented for Week 4 follow-up.
- **Time-Based:** All deliverables completed and submitted before June 23, 2026.

Operations

Assignments: Tasks will be divided among team members based on project requirements and individual strengths.

Meetings: Weekly team meetings will be conducted to review progress and discuss upcoming work.

Communication Guidelines: Team members should respond to messages within 24 hours and inform the Team Leader if they face any challenges or delays.

Status Updates: Dashboard built and live. SQL validation completed for 7 metrics. Two discrepancies identified — the I-20 Issued scorecard mismatch (SQL: 100% vs. dashboard: 67.8%) and the "CANCELLATION" label on blank fee records —

	both documented in the Week 3 report and flagged for resolution in Week 4. No join key found between SEVIS and Applicant datasets; flagged as a structural gap requiring OIS input.
--	--

	Deadlines: All tasks should be completed before the internal review date so that sufficient time is available for final checking and submission.
Operations: • Assignments • Meetings • Communication Guidelines • Status Updates • Deadlines	Assignments: Team members will work on data cleaning, data validation, database management, documentation, data analysis, and dashboard development according to their assigned responsibilities. Tasks will be distributed by the Team Leader based on project requirements and team members' skills. Meetings: The team will meet once every week through Microsoft Teams or Google Meet to discuss progress, review completed work, resolve issues, and plan upcoming tasks. Additional meetings will be scheduled when required. Communication Guidelines: The Team Leader will serve as the main point of contact with the sponsor. Team members are expected to communicate respectfully, actively participate in discussions, and respond to messages within 24 hours. WhatsApp and Microsoft Teams will be used for regular communication and updates. Status Updates: Dashboard built and live. SQL validation completed for 7 metrics. Two discrepancies identified — the I-20 Issued scorecard mismatch (SQL: 100% vs. dashboard: 67.8%) and the "CANCELLATION" label on blank fee records — both documented in the Week 3 report and flagged for resolution in Week 4. No join key found between SEVIS and Applicant datasets; flagged as a structural gap requiring OIS input. Deadlines: All assigned tasks must be completed before the internal review date. Weekly reports and project deliverables will be submitted according to the timeline provided by Excelerate and the project sponsor.

Excelerate Week 3 — SEVIS Compliance Analytics Report

SLU International Student Compliance Analysis — Team 25

1. Dashboard Link

Live Looker Studio dashboard:

https://datastudio.google.com/u/0/reporting/78dd2b26-da41-498c-b9d4-fac10666d868/page/p_frdc4loq4d

This link opens directly on the “Untitled page” tab — the plain-language Key Findings & Compliance Risks write-up. Looker Studio assigns a unique page ID to the URL for whichever tab is active (e.g. /page/p_ufvibnq4d for Summary & Key Findings), so this specific link will always land on that write-up; reviewers can use the left-hand navigation to move between the other six tabs.

2. Dashboard Design

The dashboard is built across 7 tabs in Looker Studio, connected live to the Supabase PostgreSQL “Sevis_Cleaned” table (3,524 records, 87 columns). Each tab answers one compliance question.

Eligibility Analysis (+ cont.)

Shows who the student population is: total record count, countries represented, education level mix, gender split, and the top declared majors and countries of citizenship. This establishes the denominator for every other compliance rate on the dashboard — you can't judge a 53% non-payment rate without first knowing the population it's drawn from.

Eligibility Analysis tab — population totals, education level, and gender distribution

Document Compliance (+ cont.)

Tracks how many students have a passport, visa, date of entry, or I-94 on file, broken down by education level and by country. It also shows the I-20 Issue Reason distribution. This tab flags pre-arrival documentation gaps before students travel.

Document Compliance tab — passport/visa/I-94 completeness by education level

Fee Payment Analysis

Focuses on I-901 SEVIS fee compliance: total fee transactions, total dollars collected, fee cancellations, and payment status by country and over time. Since a US visa cannot be issued without proof of fee payment, this tab is the clearest leading indicator of which students are blocked from progressing.

Fee Payment Analysis tab — \$360,700 collected; 53% payment-status split

Applicant Pipeline Analysis

Covers the admissions funnel for all 6,875 applicants (a separate table from the 3,524 enrolled SEVIS records): deposit payment status, I-20 issuance status, and how many applicants still have no advisor assigned. This tab exists to catch students who are stalled before they ever reach the SEVIS-tracked stage.

Applicant Pipeline Analysis tab — deposit and I-20 status across 6,875 applicants

Summary & Key Findings

A one-page executive rollup of every headline number from the other six tabs, plus a plain-language list of the five biggest compliance risks. This is the page a non-technical stakeholder (e.g. a compliance officer) would read first.

Summary & Key Findings tab — narrative write-up of the top 5 compliance risks

3. SQL Scripts

All queries were run in pgAdmin 4 against postgres/postgres@Queen Esther's Project, table public."Sevis_Cleaned", to independently verify the numbers Looker Studio was displaying.

3.1 Total Students

```
-- TOTAL STUDENTS
SELECT COUNT(*) AS Total_Students
FROM public."Sevis_Cleaned";
```

Result:

total_students = 3,524 — confirms the record Count field shown on every dashboard tab

3.2 Eligibility / Fee Payment Rate

```
-- ELIGIBILITY RATE
SELECT
  COUNT(*) FILTER (WHERE "I_901_Transaction_Type" = 'PAYMENT') AS eligible_count,
  ROUND(
    100.0 * COUNT(*) FILTER (WHERE "I_901_Transaction_Type" = 'PAYMENT') / COUNT(*),
    2
  ) AS eligibility_rate_pct
FROM public."Sevis_Cleaned";
```

The screenshot shows the pgAdmin 4 interface. The left pane displays the database structure with 'Sevis_Cleaned' selected under the 'public' schema. The main pane shows a SQL query with two parts: a total student count and an eligibility rate calculation. The results pane shows a single row with the following data:

eligible_count bigint	eligibility_rate_pct numeric
1602	45.46

Query text:

```

1  -- TOTAL STUDENTS
2  SELECT COUNT(*) AS Total_Students
3  FROM public."Sevis_Cleaned";
4
5
6  -- ELIGIBILITY RATE
7  SELECT
8    COUNT(*) FILTER (WHERE "I_901_Transaction_Type" = 'PAYMENT') AS eligible_count,
9    ROUND(
10     100.0 * COUNT(*) FILTER (WHERE "I_901_Transaction_Type" = 'PAYMENT') / COUNT(*),
11     2
12   ) AS eligibility_rate_pct
13  FROM public."Sevis_Cleaned";
14
15

```

Data Output: Showing rows: 1 to 1 | Page No: 1 of 1

Total rows: 1 | Query complete 00:00:00.932

Result: eligible_count = 1,602 | eligibility_rate_pct = 45.46%

3.3 No Fee Paid

```

-- NO FEE PAID
SELECT
  COUNT(*) FILTER (WHERE "I_901_Transaction_Type" IS NULL OR "I_901_Transaction_Type" = '')
AS no_fee_count,
  ROUND(
    100.0 * COUNT(*) FILTER (WHERE "I_901_Transaction_Type" IS NULL OR
"I_901_Transaction_Type" = '') / COUNT(*),
    2
  ) AS no_fee_pct
FROM public."Sevis_Cleaned";

```

The screenshot shows the pgAdmin 4 interface. The left pane displays the database structure with 'Sevis_Cleaned' selected under the 'public' schema. The main pane shows a SQL query for 'no_fee_count' and 'no_fee_pct'. The results pane shows a single row with the following data:

no_fee_count bigint	no_fee_pct numeric
1869	53.04

Query text:

```

28  FROM public."Sevis_Cleaned";
29
30
31  -- NO FEE PAID
32  SELECT
33    COUNT(*) FILTER (WHERE "I_901_Transaction_Type" IS NULL OR "I_901_Transaction_Type" = '')
34    AS no_fee_count,
35    ROUND(
36     100.0 * COUNT(*) FILTER (WHERE "I_901_Transaction_Type" IS NULL OR "I_901_Transaction_Type" = '') / COUNT(*),
37     2
38   ) AS no_fee_pct
39  FROM public."Sevis_Cleaned";
40
41  -- INDIA HIGHEST TRANSACTION COUNT
42  SELECT "Country of Citizenship" COUNT(*) AS transaction count

```

Data Output: Showing rows: 1 to 1 | Page No: 1 of 1

Total rows: 1 | Query complete 00:00:00.761

Result: no_fee_count = 1,869 | no_fee_pct = 53.04%

3.4 Countries Represented

```
-- COUNTRIES REPRESENTED
SELECT COUNT(DISTINCT "Country_of_Citizenship") AS Country_Count
FROM public."Sevis_Cleaned";
```

Result: country_count = 66

3.5 I-20 Issued (Yes %)

```
-- I-20 ISSUED (YES%)
SELECT
  COUNT(*) FILTER (WHERE "I_20_Issue_Reason" IS NOT NULL AND "I_20_Issue_Reason" <> '') AS
  i20_issued_count,
  ROUND(
    100.0 * COUNT(*) FILTER (WHERE "I_20_Issue_Reason" IS NOT NULL AND "I_20_Issue_Reason" <>
    '') / COUNT(*),
    2
  ) AS i20_issued_pct
FROM public."Sevis_Cleaned";
```

4. Reconciliation Summary

Comparing every SQL-verifiable metric against what the live dashboard displays:

Metric	SQL Result	Dashboard Result	Match?
Total F-1 Students	3,524 (confirmed via dedicated COUNT(*) query)	3,524 — Record Count, shown on every page	Exact match
Countries Represented	66	66 — Eligibility Analysis & Summary pages	Match
Fee Payment Rate (I_901_Transaction_Type = PAYMENT)	1,602 students / 45.46%	45.5% — “PAYMENT” slice, Fee Payment Status pie	Match (rounding only)
No / Blank Fee Record (I_901_Transaction_Type NULL or blank)	1,869 students / 53.04%	53% — labeled “CANCELLATION” on the same pie	Numbers align, definitions don’t — flag
Top Country by PAYMENT Transactions	India = 1,060	India — Paid = 1,060 (Payment Status by Country table)	Exact match
I-20 Issued	3,524 students / 100% (I_20_Issue_Reason IS NOT NULL)	2,389 (I-20s Issued scorecard); INITIAL reason = 3,506 (99.5%)	Mismatch — unresolved
Total SEVIS Fees Collected	Not queried in this script	\$360,700 (I_901_Transaction_Amount sum)	Not verifiable yet — no SUM query run
Deposits Paid / Total Applicants	N/A — lives in Applicant table, not Sevis_Cleaned	1,512 paid / 6,875 total applicants	"Cannot validate via Sevis_Cleaned — Deposits Paid lives in the Applicant dataset (6,875 records). A cross-table join key between SEVIS and Applicant is not currently available (flagged in Section 5 Insights as an integration gap)."

Two items need attention before this dashboard can be called fully reconciled:

- I-20 Issued — SQL says 100% of students have a non-blank I_20_Issue_Reason, but the dashboard scorecard reports only 2,389 (67.8%) issued, and the I-20 Issue Reason pie shows 99.5% as “INITIAL.” These three numbers can't all be measuring the same thing. The dashboard's “I-20s Issued” card is almost certainly built on a different field (likely I_20_Status) than the one this query checked (I_20_Issue_Reason). This is the same derivation-logic gap flagged in Week 2 — it needs to be redefined or explicitly marked unverifiable in the submission.
- No Fee Paid vs. “CANCELLATION” — the SQL no_fee_pct (53.04%) numerically matches the dashboard's CANCELLATION slice (53%), but “no transaction record” and “a cancelled transaction” are not the same compliance event. Worth confirming with the raw data whether

blank values are being mapped to CANCELLATION somewhere in the Looker Studio data source, or whether this is coincidence.

5. Insights

What the reconciled numbers say about compliance risk at SLU:

- Fee payment is the biggest active blocker. 53% of the 3,524 F-1 students have no confirmed I-901 SEVIS fee payment on record, and since a US visa cannot be issued without that confirmation, more than half the student body is currently stuck at this single checkpoint.
- Risk is concentrated in one country. India accounts for 59% of all students and 1,060 of the verified PAYMENT transactions — more than 7x the next-highest country (Nigeria, 147). Any delay or policy change affecting Indian student processing would disproportionately stall the whole pipeline.
- Document readiness looks fine, but it's a false signal. 91%+ of students show no passport or visa on file. That reads as a five-alarm problem, but it's explained by enrollment timing — most records predate arrival. It should be reframed as a pre-arrival monitoring metric, not a compliance failure, or it will mislead anyone reading the dashboard cold.
- The admissions pipeline (6,875 applicants) has a large unmanaged segment: 57.6% have no advisor assigned and only 22% have paid a deposit. This is upstream of SEVIS entirely — students can stall here before they ever become an I-20/SEVIS compliance concern.
- The I-20 issuance metric is not yet trustworthy. Until the discrepancy between 100% (SQL), 67.8% (dashboard scorecard), and 99.5% (Issue Reason pie) is resolved, any report citing an I-20 issuance rate for SLU should say so is unverified rather than presenting one of these three numbers as fact.
- No join key exists between the SEVIS and Applicant datasets. This is the structural reason several of the mismatches above are hard to chase down — a mapping table from the Office of International Students would let future dashboards reconcile applicant-stage and enrolled-stage compliance in one query instead of two disconnected tables.
